

NACFE will Announce Results from its Fleet Fuel Management Efficiency Study on February 19th

Council coordinates the sharing of real-world technology adoption experiences.

The NACFE has recently completed a Study with eight of the more innovative fleets in North American on the adoption of 60 technologies and practices available over the past eight years. Fleets in the study include CR England, Challenger Motor Freight, Con-way Truckload, Frito Lay, Gordon Trucking, Ryder, Schneider and Werner, representing 75,000 tractors and 130,000 trailers. The adoption is then compared to actual fuel efficiency for the fleet. Various technologies are discussed, best practices for fuel management identified and conclusions and recommendations offered. A report package consisting of the report, an on-line e-learning course and a onetime question and answer session with the study team will be available via the Council's website (www.nacfe.org) on February 20th.
